

I&C Startup and Commissioning Services

Though startup and commissioning account for barely 5% of all operations, it's during these types of non-routine activities that 70% of major accidents occur. The smartest way to protect against these liabilities and minimize disruption is to partner with an expert who manages startup and commissioning projects on a regular basis. **Let us apply the experience we've gained through 15,000+ successful projects to get you up and running quickly and safely.**

Experience ... the MAVERICK Difference

- 50+ startup and commissioning projects per year
- 100+ I&C technicians and electricians on staff
- 200,000 hours per year of on-site technical visits
- Static and dynamic testing
- Integrated support

A SAFER, SMARTER WAY TO START UP

Partnering with MAVERICK for Your Project

Your team's strength lies in plant/mill operations — and it should! But that means most of your staff have participated in only a handful of startup and commissioning projects during their careers. Though our commissioning managers and technicians have limited operational experience, they complete a commissioning or startup project every couple of months.

The efficiencies we've developed over the course of thousands of projects allow us to partner with your team more effectively. Keeping your staff focused on day-to-day and startup *operations* is key to reducing safety risks during startup and commissioning. By working together, we can help you safely hit your target startup date and enhance your post-startup reliability without interrupting your process.

Parallel Processes for Quicker Completion

Our commissioning process is designed to maximize the reliability of your operations while meeting or improving your intended startup date. We've devised a four-step method by which we work in parallel with construction efforts to complete the entire process more quickly.

Step One: Pre-static inspection (PSI) to monitor construction progress for mechanical completion

Step Two: Static checks to monitor construction progress for electrical completion

Step Three: Pre-dynamic testing to demonstrate the viability of control devices

Step Four: Dynamic testing to ensure the system meets your team's requirements

Let MAVERICK help make your startup process safer and more efficient.
Experience ... the MAVERICK Difference

About MAVERICK Technologies®

Founded in 1999, MAVERICK is the largest independent systems integrator in North America, and is a global leader in industrial automation, enterprise integration and strategic manufacturing solutions for clients across a wide range of manufacturing and process industries. Leveraging its unique enterprise-wide perspective, MAVERICK identifies suboptimal operations and improves performance for greater safety, efficiency and overall profitability. The company's people, processes and technical capabilities ensure delivery of the right solution for every project, using the most appropriate technology. Organizations around the world depend on MAVERICK's responsiveness, results-driven approach and dedication to their success. Over the years, MAVERICK has completed more than 15,000 projects in 46 countries across six continents. To learn more about MAVERICK, please [visit mavtechglobal.com](http://mavtechglobal.com).
